ABOUT ME

I am a software developer with over 8 years of experience, specializing in Java, Spring Boot, Spring Framework, Vue, and Angular. I began my journey in Web Application Development as part of an Erasmus+ project, building a gamified learning web app. I have worked with multiple companies developing robust web applications using Spring Boot and Spring Framework and integrating a variety of services and APIs. I am committed to continuous learning and growth, and I enjoy collaborating in teams and sharing ideas.

Experience

Software Developer — Hiberus

Remote · 07/2023 – Present

- Microservices with Spring Boot (Java 17)
- Testing with JUnit and Mockito
- CI/CD with GitHub Actions, SonarQube, and Fortify to ensure service quality and security

Software Developer — Entornos de Formación (EDF)

Valencia · 04/2021 – 07/2023

- Spring Boot microservices with Java 11
- Worked on educational platform systems like Moodle and Canvas
- Developed plugins using platform-specific technologies including Java, PHP, JS, CSS, and HTML

Junior Consultant — Capgemini

Valencia · 11/2020 – 04/2021

- Microservices with Spring Boot and Swagger for API documentation and testing
- Front-end development using Angular 10
- Data access using JPA and Hibernate frameworks

Junior Consultant — Capgemini

Asturias · 07/2017 – 11/2020

- Worked with Java web applications using Apache Struts framework
- Implemented Spring Boot microservices and Swagger-based API documentation/testing
- Used JPA and Hibernate for database access

Programmer — Capgemini

Asturias · 07/2017 – 11/2020

- ASP.NET programming during internship for the "Multiplatform Application Development" program completion
- File and database access using ASP.NET framework

Education

University of Applied Sciences in Cross Platform Application Development

IES Juan Jose Calvo Miguel · 09/2015 – 06/2017

- Handled various data serialization formats and data access methods.
- Used relational databases and SQL for data query and management.
- Developed interfaces with Java Swing and C#.
- Managed ERP systems.
- Developed Android applications.
- Built web pages with HTML and stylesheets using CSS.
- Worked with XML and validation using DTD or XSD.
- Used Linux systems.
- High proficiency in Java development.

Skills

Java EXPERT

Spring Boot

Spring Framework
(MVC, Data, Batch,
Cache)

JPA

Apache Struts

JUnit

Mockito

- English (Professional)
- Spanish (Native)

Projects

The Learning Games -

Erasmus+ Gamified education web application.

Our project proposes to develop a gamification system of educational delivery that taps into elements from the modern students real world experience and incorporate them into an integral framework that can be used to assess all kinds of learning (formal, primarily, but also informal and non-formal) within the classroom through the achievements the students make in their modules; a system that provides immediate and accessible feedback about performance and the level of mastery acquired and what needs to be learnt in order to progress; a system that improves teacher-student communication, and also student-student communication, a social dimension of learning, which is known to encourage deeper engagement with the activities. The overall objective is committing the students to change their attitude towards learning, increasing their motivation and consequently enabling them to achieve their full potential.

- Interface developed with HTML5, CSS, and AngularJS for app behavior.
- Database: Firebase
- HTML Framework: Ionic Framework

Certifications

- Master Certified (SMC) 2024
- Scrum Product Owner Certified (SPOC) 2024
